

An Intimate Look into The Human Social Origin

Children have an intimate relationship with the ghost of their origin in a way grownups don't. It's not the ghost inside, but the one outside that will haunt them for the rest of their born days!

Every now and then something comes along which changes everything! An old saying is that “the faith of a mustard seed can move a mountain.” But now, instead of a tiny mustard seed, we are going to learn how one tiny four-letter word will change the perspective of how we connect with the origin of life!

Hidden meanings of myth and mysticism are replaced by presenting the truth of life in a very realistic way—just straight talk and simple explanations about where each one of us comes from and how to recapture the memory of it.

Believers and Atheists alike

Miracle
Free

Introduce yourself to the existence of a deity that neatly fits the description of what religious organizations call God—a personal experience when a spirit of life reveals the reality of a deity, replacing any belief in a god.

How do humans connect with this deity, and why do they lose the memory of it? How do parents convey the essential message of this special happening to their children? Why are some religions passionate about ritual methods of worship? And more questions surface about the future of such a society that might take on a direct connection to the origin.

Although this subject is focused more toward children it is by no means just for children. The primary purpose is to get people, whatever their age or perspective on life, to remember this first sense of life as their origin.
